Eisenhower Matrix: Persistent Task Reminder App

	Urgent	**Not Urgent**
Important	**Do - (Your MVP)** • Core task creation (Title and target start time) • The 15-minute looping nudge notification until the user acknowledges they've started • The 1-hour follow-up trigger to check if the task is finished	**Schedule - (For V2.0+)** • Calendar integration / data persistence • GUI using Java Swing or JavaFX • Daily/weekly productivity analytics and streak tracking
Not Important	**Delegate - (Use a library)** • Use Java's built-in ScheduledExecutorService for handling background time delays instead of building custom thread logic	**Delete - (Cut it)** • Complex cloud syncing and multi-device user accounts

	• Use a standard JSON library to handle data export/import	• Built-in AI task breakdown suggestions
	• Use system notification libraries for desktop popup alerts rather than writing raw OS graphics	• Custom soundboard audio effects for notifications
